

**CHANNEL ISLANDS HARBOR WATER QUALITY:  
REMOTE SENSOR DATA – 10/05/21 THROUGH 10/13/21**

Below is the weekly remote sensor data from 10/05/21 to 10/13/21. Dissolved oxygen concentrations (DO; in blue) were acceptable at both stations. Chlorophyll concentrations (a proxy for microscopic algal biomass, in green) were generally low with normal daily oscillations observed. The brief spikes of chlorophyll observed at both stations may be due to interference from boat traffic or floating macroalgae

The City of Oxnard and Aquatic Bioassay & Consulting will continue to monitor the sensors in the area.
