

**CHANNEL ISLANDS HARBOR WATER QUALITY:
REMOTE SENSOR DATA – 11/03/21 THROUGH 11/10/21**

Below is the weekly remote sensor data from 11/3/21 to 11/10/21. Dissolved oxygen concentrations (DO; in blue) were acceptable at both stations. Chlorophyll concentrations (a proxy for microscopic algal biomass, in green) were generally low with normal daily oscillations observed. The brief spikes of chlorophyll observed at Westport (station 7) at the beginning of the week may be due to interference from boat traffic or floating macroalgae.

11/10/21 is the last day of sensor deployment for the year 2021.
