CHANNEL ISLANDS HARBOR WATER QUALITY: CALIFORNIA CHANNEL ISLANDS HARBOR WATER QUALITY: REMOTE SENSOR DATA – 05/27/21 THROUGH 06/03/21

Below is the weekly remote sensor data from 5/27/21 to 6/3/21. Dissolved oxygen concentrations (DO; in blue) were generally acceptable at both stations. DO concentrations dropped below 4 mg/L in the early mornings for a few days at both stations but concentrations recovered quickly later in the morning. Generally low concentrations of chlorophyll with normal daily oscillations (chlorophyll is a proxy for microscopic algal biomass, in green) were observed at both stations.

The City of Oxnard and Aquatic Bioassay & Consulting will continue to monitor the sensors in the area.
