

**CHANNEL ISLANDS HARBOR WATER QUALITY:
REMOTE SENSOR DATA – 06/23/21 THROUGH 06/30/21**

Below is the weekly remote sensor data from 6/23/21 to 6/30/21. Dissolved oxygen concentrations (DO; in blue) were generally acceptable at both stations. There were a few days in which DO concentrations dropped to or slightly below 4 mg/L briefly in the night or early mornings at both stations, but concentrations recovered quickly later in the morning. Chlorophyll concentrations (a proxy for microscopic algal biomass, in green) trended downward at the start of the week at both stations, leading to generally low concentrations for most of the week.

The City of Oxnard and Aquatic Bioassay & Consulting will continue to monitor the sensors in the area.
