

**CHANNEL ISLANDS HARBOR WATER QUALITY:
REMOTE SENSOR DATA – 3/30/22 THROUGH 10/26/22**

Below is the remote sensor data from 3/30/22 to 10/26/22, which is data collected since the date of installation (3/30/2022). This data captures trends of dissolved oxygen concentrations (DO; individual data points in blue and rolling average of prior 50 data points in yellow) and chlorophyll fluorescence (a proxy for microscopic algal biomass; individual data points in green and rolling average of prior 50 data points in red) at two designated sampling locations. Data points for chlorophyll >100 µg/L were removed (gaps for green lines at station 7) as the values are likely artifactual, possibly due to interference by drifting macroalgae. Logger 62555 replaced logger 62556 on 6/1/22 due to erratic readings from the chlorophyll sensor of logger 62556.

Loggers at both stations were retrieved on 10/26/22, concluding their deployment for the year of 2022.

Logger 062554 - Located at Seabridge (Station 6)

Logger 062556/062555 - Located at Westport (Station 7)
